
1) Chat App Redesign: Create a Wireframe and redesign any popular chat app.

Design Process:

1. Frame Setup

- Selected Android Compact frame.
- Added status bar.

2. Header Design

- Create a header container.
- Add a WhatsApp branding text.
- Include utility icons.

3. Body Structure

- Implement a search container with icon and placeholder text.
- Create filter buttons section with three options:
- "All", "Unread" and "Groups" buttons.

4. Contact List Elements

- Design contact container with:
 1. Profile picture
 2. Contact name
 3. Time indicator
 4. Last message preview.
 5. Status indicators (pinned, etc.)
- Duplicate and customized for multiple conversations

5. Navigation Bar

- Create bottom navigation with four sections:
 1. Chats (active, highlighted in green)
 2. Updates, Communities, and Calls (inactive)
-
-

1. Chat App Wireframe

2) Food App: Create a wireframe, Design and Prototype the UI Pages for the food application.

Design Process:

- Base Setup
 1. Use Android Compact frame.
 2. Add a status bar.

2. Navigation Structure

- Create a top navigation bar.
- Implement a main navigation options: Delivery, Dining, Nightlife, and Blinkit.

3. Location & Search Elements

- Design a location container with:
 1. Location icon
 2. Place name
 3. Address text with dropdown arrow
- Create search bar.
- Add a veg toggle switch.

4. Category Navigation

- Implement a horizontally scrollable food type container.
- Add category icons with labels (Fast Food, etc.).

5. Filter System

- Create filter buttons.
- Include common filters.

6. Restaurant Listings

- Design restaurant cards with:
 1. Restaurant image
 2. Name and ratings
 3. Cuisine tags and estimated delivery time
 4. Special offer indicators

7. Restaurant Detail Page

- Create restaurant header with navigation options.
- Implement rating, distance, and timing information.
- Add offers section with horizontal scroll.
- Design menu section with categorized food items.

8. Prototype Connections

- Connect restaurant cards to detail page.
- Add back button functionality to return to main screen

2. Food App Wireframe

3) Social Media App: Create a wireframe, Design and Prototype social media photo sharing app.

Design Process:

Home Screen Elements:

1. Branding Container

- Instagram logo with dropdown.
- Notification and messaging icons.

2. Stories Container

- "Your Story" with add button.
- User stories with gradient outlines.

3. Post Structure:

- Header with profile picture, username and options
- Image container
- Interaction buttons (like, comment, share, bookmark)
- Caption and comments section

4. Navigation Bar

- Home, Search, Create, Reels, Profile icons

Profile Page Elements:

1. Profile Header

- Back button, username, options menu

2. Profile Information

- Profile picture
- Posts/Followers/Following counts
- Bio text
- Action buttons (Follow, Message, Add)

3. Content Navigation

- Grid view. Reels, Tagged tabs

4. Posts Grid

- 3-column layout

Interactive Prototype

- Connect profile navigation between home and account pages.
 - Implement navigation between sections.
-
-

3. Social Media App

4)Product Website: Design and prototype a product website page. Create web pages and rollovers for the web pages.

Design Process:

Navigation Elements:

1. Navigation Bar

- Google logo.
- Product category links (Phones, Earbuds, etc.).
- Search, Cart, and Profile icons.
- Set to fixed position for scrolling.

Main Content Sections:

1. Hero Section

- Gradient heading: "Oh hi, Gemini".
- Product subheading and interactive "Browse Phones" button.
- Featured Pixel devices image.

2. Recommendations Section

- "Our Top Recommendations" heading.
- Horizontal scrollable product container.
- Individual product cards with:
 - Product image on light background
 - "New" tag where applicable
 - Product name in bold

3. Product Showcase

- "New. Now. Wow." Heading.

- Wrapped layout of varying-sized product containers:
- Large containers for Pixel phones
- Wide container for Pixel Fold
- Tall containers for wearables
- Product description and "Learn More" button

Interactive Elements:

1. Button Components

- Browse Phones button with hover state
- Learn More button with hoverstate

2. Scrolling Behavior

- Vertical overflow for main page
- Horizontal overflow for product recommendation carousel

4. Product Website

5) Travel Agency Website: Create a wireframe, Design and prototype the UI for the website including design a for Home Page with search bar, Activities page, Client Testimonial Page, Image Gallery.

Design Process:

Navigation Elements:

1. Navigation Bar

- Fixed position navigation bar with Travel Advisor logo.
- Main navigation buttons (Discover, Tips, Review, Forums).
- Secondary buttons (Currency, Sign in).
- Secondary navigation bar with service categories (Search All, Hotels, Things to do, etc.).

Home Page Components:

1. Hero Section

- Search bar with icon and button.
- "Plan your kind of trip" call-to-action.
- AI trip builder feature highlight.

2. Destinations Section

- "Explore the world's most stunning seashores heading.
- Grid display of featured destinations.
- Gradient overlay on destination images for text legibility.

Explore Page Components:

1. Directory Structure

- Breadcrumb navigation showing current location.
- Page heading "Best of the Best Beaches in the World".

2. Featured Beach Section

Hero image with gradient overlay, Badge and awards information, Location details with icons.

3. Review Section

- Rating display, Review cards with user comments, User identification elements.

Interactive Elements:

- Expandable search bar with popular destinations suggestions.
- Connection between pages using prototype links:

1. World destinations card links to Explore page.
2. Logo links back to Home page.

5. Travel Agency Website

6) UI/UX Designer Portfolio Design: Create a wireframe, Design and prototype a UI for a portfolio including design for About page, Work showcase page, Blog page, contact page.

Design Process:

1. Homepage Implementation

- Design hero section with name, title and brief introduction.
- Add navigation menu with smooth scrolling functionality.
- Implement a skills section using icons or progress bars.
- Create a featured projects preview grid

2. Project Showcase

- Design project cards with:
- Featured image or screenshot
- Project title and brief description
- Technologies/tools used
- Call-to-action button linking to case study

3. About & Contact Sections

- Create an about section with professional photo and biography.
- Add downloadable resume option.
- Implement contact form with validation.
- Include social media links and professional networks.

4. Interactive Elements

- Add hover effects to project cards and navigation items.
- Implement smooth page transitions.
- Create loading animations for images and content.
- Add subtle scroll-triggered animations.

6. Portfolio Website

7) Dashboard Design: Create a wireframe, Design and Prototype Dashboard UI page, add some Dashboard details, statistics and graphs, Add dropdown options for some dashboard details.

Design Process:

Layout Structure

Desktop frame with vertical layout.

- Header Section
- Horizontal layout with welcome message and user name.
- Action buttons (Calendar selector, Export button).

Statistics Overview

1. Key Metrics Cards

- Four equal-width cards showing critical data points.
- Each card includes metric title and value, percentage change indicator.

2. Revenue Overview

- Line chart with header with title and time period dropdown.
- Monthly trend visualization.

3. Traffic Sources

- Donut chart with visual distribution of traffic channels.
- "Last Week" filter option.

Detailed Data Sections

1. Top Products:

- Card showing best-performing items
- Each product displayed with:
 1. Product name and sales data.
 2. Progress bar indicating performance.

2. User Demographics:

Regional distribution with bar chart Percentage breakdown by location.

3. Recent Activities

- Timeline-style interface.
 - Activity description and timestamp.
 - Action buttons for follow-up tasks.
 - "View All link for accessing complete history.
-
-

8) E-Commerce Website: Create a wireframe, Design and prototype Web pages including product category pages (example: mobiles, gaming consoles, Speakers), product pages in each category, buynow page, add to cart page

Objective

To create wireframes, design, and prototype web pages of an E-Commerce website including:

Product Category Pages (Mobiles, Gaming Consoles, Speakers)

Product Detail Pages

Add to Cart Page

Buy Now Page

Tools Required

Figma (UI/UX Design Tool)

Web Browser (Chrome)

Theory

Wireframing is the process of creating a basic layout of a webpage. It helps visualize structure before designing.

Prototyping allows interaction between pages (navigation, buttons, links).

E-commerce websites consist of:

Home Page

Category Page

Product Page

Cart Page

Checkout Page

Procedure

Step 1: Open Figma

Go to Figma Official Website ?

Login → Click New Design File

Step 2: Create Frame

Select Frame Tool (F)

Choose Desktop size (e.g., 1440 × 1024)

Wireframes

1. Home Page Wireframe

| Logo | Search Bar | Login | Cart

| Banner / Offers |

| Categories: |

| [Mobiles] [Gaming Consoles] [Speakers] |

| Featured Products

| Footer |

2. Category Page (Mobiles / Gaming / Speakers)

| Filter | Product List

| [Product Image] Price Add to Cart |

| [Product Image] Price Add to Cart |

3. Product Page

| Product Image | Product Details

	Name	
	Price	
	Description	
	[Add to Cart] [Buy Now]	

4. Add to Cart Page

Product List				
Name	Price	Quantity	Remove	

Total Price	
[Proceed to Checkout]	

-----5. Buy Now / Checkout Page

Address Details	
Payment Method	
Order Summary	
[Place Order]	

Design Steps in Figma

Use Shapes (Rectangle, Text) to create layout

Add colors, fonts, icons

Import product images

Use Auto Layout for alignment

Maintain consistency in spacing and design

Prototype Steps

Click Prototype Tab

Connect:

Category → Product Page

Product → Add to Cart

Cart → Checkout

Set interaction:

On Click → Navigate To

Click Present to preview

Result

Successfully designed and prototyped an E-Commerce website in Figma with:

Category Pages

Product Pages

Cart System

Checkout Flow

Conclusion

The experiment helped understand UI/UX design, wireframing, and prototyping concepts using Figma for real-world applications like E-commerce platforms.

Experiment Title

Design and Prototype an Educational Website using Figma

Objective

To create wireframes, design, and prototype an educational website including:

Homepage (with footer)

About Us Page

Programs Page (with dropdown)

Instructors Page

Pricing Page

Payments Page (with radio buttons)

Tools Required

Figma

Web Browser (Chrome)

Theory

Wireframing is a basic visual guide representing the structure of a website.

UI Design focuses on layout, colors, typography, and user interaction.

Prototyping connects different pages and simulates real-time navigation.

Educational websites include structured navigation such as:

Course listings

Instructor details

Pricing plans

Secure payment systems

Procedure

Step 1: Open Figma

Go to Figma Official Website ?

Login → Click New Design File

Step 2: Create Frames

Use Frame Tool (F)

Select Desktop size (1440 × 1024)

Create separate frames for each page

Wireframes

1. Homepage Wireframe

Header: Logo | Home | About | Programs | Instructors | Pricing | Login

Banner section with heading and CTA button

Features section (icons + text)

Footer:

About links

Quick links

Contact details

2. About Us Page

Company introduction

Mission and Vision

Image section

Footer

3. Programs Page (Dropdown Design)

Programs button with dropdown:

Engineering

Management

Data Science

Design

Languages

Program cards:

Image

Title

Description

4. Instructors Page

Instructor cards:

Photo

Name

Expertise

Social icons

5. Pricing Page

Plans:

Basic

Standard

Premium

Each includes:

Price

Features

Select Button

6. Payments Page (Radio Buttons)

Select Payment Method:

Credit/Debit Card

PayPal

UPI

Net Banking

Wallet

Input fields:

Cardholder Name

Card Number

Expiry Date

CVV

Button: Pay Now

Design Steps

Add colors and typography

Insert images and icons

Use Auto Layout for alignment

Maintain spacing and consistency

Create reusable components

Prototype Steps

Open Prototype Tab

Link pages:

Homepage → About

Homepage → Programs

Programs → Instructors

Pricing → Payments

Add interaction:

On Click → Navigate To

Click Present to preview

Result

Successfully designed and prototyped an educational website with:

Structured navigation

Dropdown menus

Instructor and pricing sections

Payment system with radio buttons

Conclusion

The experiment helped understand wireframing, UI design, and prototyping concepts using Figma. It also improved skills in designing real-world educational platforms.

Viva Questions

What is a wireframe?

What is the purpose of a dropdown menu?

Difference between UI and UX?

What are radio buttons used for?

What is prototyping in Figma?

LAB MANUAL

EXPERIMENT TITLE

Design and Prototype an E-Commerce Website using Figma

OBJECTIVE

To create wireframes, design, and prototype web pages of an E-Commerce website including:

- Product Category Pages (Mobiles, Gaming Consoles, Speakers)
- Product Detail Pages
- Add to Cart Page
- Buy Now Page

TOOLS REQUIRED

 Figma (UI/UX Design Tool)

 Web Browser (Google Chrome)

THEORY

Wireframing is the process of creating a basic layout of a webpage. It helps visualize structure before designing.

Prototyping allows interaction between pages (navigation, buttons, links).

E-commerce websites consist of:

- Home Page
- Category Page
- Product Page
- Cart Page
- Checkout Page

PROCEDURE

Step 1: Open Figma

- Go to www.figma.com
- Login → Click on New Design File

Step 2: Create Frame

- Select Frame Tool (F)
- Choose Desktop size (e.g., 1440 x 1024)

Step 3: Design Wireframes

- Use shapes, text and icons to create layouts

Step 4: Add Content

- Add images, text, colors, icons

Step 5: Prototype

- Connect pages using Prototype Tab
- Set On Click → Navigate To
- Click Present to preview

WIREFRAMES

1. HOME PAGE WIREFRAME

2. CATEGORY PAGE (MOBILES / GAMING / SPEAKERS)

3. PRODUCT PAGE

4. ADD TO CART PAGE

5. BUY NOW / CHECKOUT PAGE

DESIGN (HIGH FIDELITY)

HOME PAGE

CATEGORY PAGE (MOBILES)

PRODUCT PAGE

ADD TO CART PAGE

CHECKOUT / BUY NOW PAGE

PROTOTYPE FLOW (INTERACTIONS)

RESULT

Successfully designed and prototyped an E-Commerce website in Figma with:

- Category Pages
- Product Pages
- Cart System
- Checkout Flow

CONCLUSION

The experiment helped understand UI/UX design, wireframing, and prototyping concepts using Figma for real-world applications like E-commerce platforms.

VIVA QUESTIONS

Viva Questions

What is a wireframe?

What is the purpose of a dropdown menu?

Difference between UI and UX?

What are radio buttons used for?

What is prototyping in Figma?

LAB MANUAL: EDUCATIONAL WEBSITE – WIREFRAME, DESIGN & PROTOTYPE

1. AIM

To create wireframes, design and prototype an educational website using Figma.

2. OBJECTIVE

Design and prototype the following pages for an educational website:

- Homepage (with footer)
- About Us Page
- Programs Page (with dropdowns)
- Instructors Page
- Pricing Page
- Payments Page (with radial buttons)

3. TOOLS USED

- Figma (UI/UX Design Tool)
- Web Browser

4. PROCEDURE

1. Open Figma and create a new file.
2. Create frames for all the pages.
3. Design low-fidelity wireframes for each page.
4. Convert wireframes into high-fidelity UI design.
5. Add interactions and prototype the flow between pages.
6. Preview and test the prototype.

5. WIREFRAMES (LOW FIDELITY)

5.1 HOMEPAGE (WIREFRAME)

5.2 ABOUT US PAGE (WIREFRAME)

5.3 PROGRAMS PAGE (WIREFRAME)

5.4 INSTRUCTORS PAGE (WIREFRAME)

5.5 PRICING PAGE (WIREFRAME)

5.6 PAYMENTS PAGE (WIREFRAME)

6. DESIGN (HIGH FIDELITY UI)

6.1 HOMEPAGE

6.2 ABOUT US PAGE

6.3 PROGRAMS PAGE (WITH DROPDOWN)

6.4 INSTRUCTORS PAGE

6.5 PRICING PAGE

6.6 PAYMENTS PAGE (WITH RADIAL BUTTONS)

7. PROTOTYPE FLOW (INTERACTIONS)

8. RESULT

Successfully designed and prototyped an educational website with all required pages including dropdowns and payment options using radial buttons.

9. CONCLUSION

This experiment helped understand the process of wireframing, designing and prototyping a multi-page educational website using Figma.

10. VIVA QUESTIONS

1. What is wireframing?
2. What is the use of dropdowns in websites?
3. What are the advantages of using prototypes?
4. What is the difference between UI and UX?
5. What are radial buttons used for?

10) Educational Website: Create a wireframe, Design and Prototype the UI for an educational website Include a Homepage with footer, About Us Page, Programs page, Instructors page, Pricing page, Payments page with radial buttons. Design dropdowns for programs button

1. Aim

To design and prototype a Music Player App that includes:

Home Page with background and rollover buttons

Song Selection Page with Home rollover button

Music Player Page with animations (Play/Pause, Timer, Music animation)

2. Objective

To understand UI/UX design principles

To create wireframes using design tools (e.g., Figma)

To apply interactive components like rollover buttons and animations

3. Tools Required

Figma / Adobe XD / Sketch

Computer System

4. Theory

A Music Player App UI consists of multiple screens that allow users to:

Browse songs

Select music

Control playback

Key UI Elements:

Wireframe (basic layout structure)

Prototype (interactive model)

Rollover Button (changes on hover)

Animations (Play/Pause, Timer)

5. Procedure

Step 1: Create Wireframe – Home Page

Open Figma

Create a mobile frame

Add:

App Title (Music Player)

Background image

Play / Start Button

Convert button into Rollover Button

Change color on hover

Step 2: Design Song Selection Page

Add list of songs:

Song Name

Artist Name

Add:

Album thumbnails

Scrollable list

Add Home Button (Rollover effect)

On hover → highlight button

Link songs to next page (prototype linking)

Step 3: Create Music Player Page

Add:

Song Title

Album Image

Add Controls:

Play / Pause button

Next / Previous

Add Animations:

Play button → transforms into Pause

Music wave animation

Timer progress bar animation

Step 4: Add Prototype Connections

Link Home → Song Selection

Song Selection → Player Page

Add interactions:

On Click → Navigate

Smart Animate → Smooth transition

Step 5: Testing

Run prototype mode

Check:

Button hover effects

Navigation flow

Animation smoothness

6. Result

The Music Player App was successfully designed with:

Wireframe layouts

Interactive rollover buttons

Animated music player interface

7. Conclusion

This experiment helped in:

Understanding UI/UX design

Creating interactive prototypes

Implementing animations and navigation

8. Viva Questions

1. What is a wireframe?

2. What is a prototype?

3. What is a rollover button?

4. What are UI animations?

5. What is Smart Animate in Figma?
